

LC/MS Analysis of Pain Management Opioids on Ascentis® Express Phenyl-Hexyl

Balancing the management of chronic pain against the real possibility of opioid dependence and subsequent abuse is an ongoing conversation in the healthcare industry. Analysts need reliable tools to identify and quantify the drugs and metabolites in patients to tip the balance toward pain management and away from abuse. LC/MS is becoming the tool of choice for this purpose. Shown here is the rapid, efficient LC/MS analysis of 13 pain management opioids on an Ascentis® Express Phenyl-Hexyl U/HPLC column. Cerilliant CRMs provided reliable identification and quantification.

market focus	Forensics and Toxicology; Pharmaceutical (small molecule)
column	Ascentis Express Phenyl-Hexyl 10 cm x 2.1 mm, 2.7 µm particles (53336-U)
mobile phase	[A] water with 0.1% formic acid; [B] methanol with 0.1% formic acid
gradient	10 to 45% B in 3 min; to 100% B in 2 min; held for 2.4 min
flow rate	0.3 mL/min
pressure	6940 psi (478 bar)
column temp.	30 °C
detector	MS, ESI(+), SIR
injection	2 µL
sample	Pain Management Multi-Component Opiate Mixture-13 (P-071) dilute to 30-300 ng/mL in 99:1, water:methanol
Application No.	G1006463
