

HPLC Analysis of Synthetic (Spice) Cannabinoids on Ascentis® Express F5

Synthetic cannabinoids (Spice) are a relatively new type of designer drug used as a pseudo-legal means to get a cannabis-type high. New synthetic cannabinoids are continually being introduced as suppliers tweak the molecular structures. The ability to rapidly and reliably identify the continually changing population of these compounds is a significant analytical challenge facing forensic chemists. A rapid

separation of nine of these compounds on Ascentis® Express F5 column is shown here. Cerilliant certified reference material grade standards enabled confident identification. We recommend using HybridSPE®-Phospholipid plates to extract these compounds from serum or plasma.
