

LC/MS (TOF) Analysis of Illicit Bath Salts in Urine on Ascentis® Express 2.7 µm HILIC after Solid Phase Extraction (SPE) using Supel™-Select SCX

Bath salts are psychoactive designer drugs of the phenethylamine and cathinone families. Shown here is the rapid, sensitive LC/TOF-MS analysis of nine bath salts extracted from human urine using polymeric SPE on Supel-Select SCX and separated on an Ascentis Express HILIC column. Notice the lack of interfering peaks in the chromatogram demonstrating the effectiveness of the sample cleanup. Cerilliant CRMs were used to ensure reliable MS identification and quantification.

market focus	Forensics and Toxicology
sample/matrix	urine samples spiked at 100 ng/mL with each target analyte (To ensure full ionization of the analytes, spiked samples were treated with formic acid to a final concentration of 0.1% formic acid.)
